A Problem

Our Solution

Some Insights

Forms are hard.

y tho

```
handleChange = e => {  
  this.setState({ value: e.target.value })  
}
```

```
// ...
```

```
<input  
  onChange={this.handleChange}  
  value={this.state.value}  
>
```

```
handleChange = (event) => {  
  this.setState({  
    [event.target.name]: event.target.value  
  })  
}
```

```
// ...
```

```
<input  
  name="thing"  
  onChange={this.handleChange}  
  value={this.state.thing}  
>
```

```
<input  
  name="other"  
  onChange={this.handleChange}  
  value={this.state.other}  
>
```

Wiring up state

**“Form state is local and
ephemeral.”**

—Our Prophet, Dan Abramov

Goals

Give Back Render Control

Solve for 80% of use cases

“Battery Pack Included”

Incrementally Adoptable

No Magic

...just use React.

No external state management

No subscriptions or observables

No reinventing the wheel

...no tears

Benefits of “just React”

Easy to understand

Easy to debug

Easy to optimize

Easy to delete

Demo

Scratch your own itch

Stand on the shoulders of giants

Solve for the 80% use case

Make it easy adopt/delete
